A Technical Report Template

First Author[1,*] Second Author[2,‡] Third Author[1,‡]

[1] Institution One [2] Institution Two

Replace this box with a teaser figure.

Figure 1 A concise teaser caption that summarizes the main idea, result, or system described by the report.

Abstract. This template provides a concise starting point for technical reports, preprints, and project notes. It includes a compact title page, optional metadata fields, a teaser figure area, section styling, and bibliography support. Replace this paragraph with a short summary of the problem, method, findings, and release artifacts.

Project Page: github.com/lhmd/microsoft-tech-report

Correspondence: {second.author, third.author}@example.com

Code: github.com/lhmd/microsoft-tech-report

Keywords: technical report, latex template, reproducible research

Date: January, 2026

[*] *Equal contribution.* [‡] *Corresponding authors.*

1 Introduction

Use the introduction to motivate the problem, identify the intended audience, and summarize the report's contributions. A useful opening section is concrete: state what was built or studied, why the problem matters, and what the reader should take away.

The template uses standard LaTeX packages and a small custom style file. It is designed to work on Overleaf and in local TeX installations with common distributions such as TeX Live or MacTeX.

2 Related Work

Summarize prior work, internal systems, or baseline approaches that frame the report. Keep citations close to the claims they support, for example [1].

For short technical reports, this section can also be replaced by a brief background section.

3 Method

Describe the core method, system, experiment, or design. Use subsections for components that readers may want to scan independently.

3.1 Design

This subsection can describe the architecture or conceptual design. The `\highlight{}` command is available for short highlighted phrases such as **important implementation details**.

3.2 Implementation

This subsection can describe implementation choices, dependencies, and engineering constraints.

4 Experiments

Report the evaluation setup, metrics, baselines, and results. Tables use normal LaTeX conventions:

Table 1 Example result table.

Method	Metric A	Metric B
Baseline	0.72	1.00
Proposed	0.85	0.64

5 Conclusion

Conclude with the main result, practical implications, and known limitations. For public reports, include links to code, data, models, or project pages when they are available.

A Appendix

Use the appendix for additional derivations, implementation details, ablation studies, or instructions that would interrupt the main report.
